Title : Applying Fundamentals of Enterprise Solutions Using IBM

Version : Demo

1. In security solution design development, when do you document the business and IT organizational structure map?

A.when establishing the customer's baseline for planning purposes

B.when identifying opportunities for business partner security offerings

C.when evaluating the customer's IT processes, people and technologies

D.when defining a long-term vision for the future direction of the customer's security solutions

Answer: A

2. Which specification has completed the OASIS standardization process as of July, 2008?

A.WS-Policy

B.WS-Security

C.WS-Federation

D.WS-SecureConversation

Answer: B

3. A current IBM Tivoli security customer is very satisfied with their current IBM Tivoli Identity Manager (ITIM) and IBM Tivoli Access Manager (ITAM) implementations. The customer has benefited greatly from the user management and provisioning, authentication, authorization and Web single sign-on processes now in place.

The customer sees the value of Web services and wants to leverage their business partnerships to greatly expand their online services, for a relatively small investment. They are expecting that their existing ITIM and ITAM investments can simply be stretched to include these business-to-business (B2B) flows.

IBM Tivoli Federated Identity Manager should be added to this scenario to address which security requirement?

A.the blocking of threats that might otherwise cross enterprise boundaries

B.the handling of potentially millions of users, which neither ITIM nor ITAM was built to address

C.the integration with firewalls that control security between any two businesses involved in these B2B flows

D.the handling of multiple types of standards-based protocols and user tokens that need to be passed between participating businesses

Answer: D

4. Which network client software collects policy data from collectors and summarizes this data to provide its version information and the number of policy violations that form the posture credentials to the CISCO Trust Agent client software?

A.CISCO Access Control Server

B.CISCO Trust Agent running on the network client system

C.Remediation Manager client running on the network client system

D.Tivoli Security Compliance Manager client running on the network client system

Answer: D

5. Which tasks need to be accomplished during an initial meeting with the customer when reviewing a company organizational chart?

A.determine the products to be used and provide Proof of Concept of the products in the solution

B.document the key players and their roles and provide Proof of Concept of the products in the solution

C.identify key decision makers and determine the products to be used

D.identify key decision makers and document the key players and their roles

Answer: D

6. Which tasks need to be accomplished during an initial meeting with the customer when reviewing a company organizational chart?

A.identify key decision makers and document the key players and their roles

B.identify key decision makers and provide a detailed analysis of the current customer configuration

C.determine which products are to be used and document the key players and their roles

D.determine which products are to be used and identify key decision makers

Answer: A

7. You meet with the customer and compile the following list concerning security:

- customers business requirements
- immediate business/security needs
- customers long-term business/security vision
- customers stated security requirements

What should also be included in this list?

A.list of products to be deployed

B.government security standards

C.existing change control processes

D.companys complete organizational chart

Answer: B

8. In order to correctly understand the data protection requirements, which two groups of people must be interviewed? (Choose two.)

A.all managers

B.IT department personnel

C.Business Unit management

D.Legal department personnel

E.Human Resource department

Answer: CD

9. Which two business goals are accomplished through the implementation of a successful automated security management process? (Choose two.)

A.increase data availability

B.increase data duplication

C.reduce impact of threats

D.eliminate any risk of frauds

E.reduce Total Cost of Ownership (TCO) for account management

Answer: CE

10. What needs to be defined for the Identity Management aspect of a Security Solution?

A.processes

B.driver's licenses

C.password selection

D.employee pay bands

Answer: A
