Exam : **810-110**

Title : Cisco AI Technical
Practitioner (AITECH)

Version : DEMO

1.Which limitation most commonly results from a small context window?

- A. Reduced creativity
- B. Inability to retain long conversation history
- C. Higher inference cost
- D. Slower token generation

Answer: B

2.A company integrates third-party AI services into its workflows. It must still comply with internal policies and external regulations.

What is the organization's responsibility in this scenario?

- A. Transfer all responsibility to the vendor
- B. Maintain governance and compliance oversight
- C. Disable internal audits
- D. Ignore data handling practices

Answer: B

3.AI tools can automatically generate unit tests and suggest fixes for detected issues. This supports developers throughout the build process.

Which improvement is most directly achieved through this capability?

- A. Reduced infrastructure cost
- B. Enhanced code quality and reliability
- C. Elimination of documentation
- D. Faster hardware deployment

Answer: B

4.A development team integrates AI tools to assist with requirements gathering, prototyping, and testing. The goal is to accelerate delivery without sacrificing quality.

Which stage of the software development lifecycle benefits most broadly from AI assistance?

- A. Deployment only
- B. Requirements and prototyping
- C. Hardware procurement
- D. Network configuration

Answer: B

5.What is the primary role of a context window in generative AI systems?

- A. Limiting training data size
- B. Defining maximum memory for a single interaction
- C. Controlling model accuracy
- D. Enforcing ethical constraints

Answer: B
