**Exam** : **HP0-461**

**Title** : Supporting the Enterprise  
Virtual Array (EVA) Storage  
Family

**Version** : DEMO

**1. Within the Command View EVA host wizard, what does the WWNs pulldown display?**

- A.assigned host WWNs seen by the array
- B.unassigned host WWNs seen by the array
- C.assigned host WWNs seen by the Storage Management Server
- D.unassigned host WWNs seen by the Storage Management Server

**Correct:B**

**2.Which replication method is compliant with both the Fast Recovery Solution and Volume Shadow Services?**

- A.preallocated snapshot
- B.virtually instantaneous snapclone
- C.space efficient snapshot
- D.three-phase snapclone

**Correct:D**

**3.When is the appropriate time to create the container for a three-phase snapclone?**

- A.immediately before its actual use
- B.well before its actual use
- C.immediately before the cache is flushed
- D.between the cache mode swap and the "flick-of-the-switch" commitment

**Correct:B**

**4.Which management interface is available for the model 352 Fibre Channel loop switch?**

- A.telnet using a serial line (RS232)
- B.hyperterminal using the device loops
- C.GUI using a web browser
- D.menu buttons using the Operator Control Panel

**Correct:C**

**5.Which restriction applies to a "snapclone replica resync"?**

- A.The target is presented.
- B.The two vdisks differ in size.
- C.The two vdisks had no previous snapclone relationship.
- D.The two vdisks participate in sharing relationships.

**Correct:C**

**6.Which cache mode is used during the three-phase snapclone process just before the "flick-of-the-switch" commitment is issued?**

- A.write-back
- B.write-through
- C.write-behind
- D.read-ahead

**Correct:B**

**7.Which Storage System Scripting Utility command interrogates the array and creates a script that can be used later to re-create the system?**

- A.monitor config "filename"
- B.sssuconfig cell "filename"
- C.save configuration "filename"
- D.capture configuration "filename"

**Correct:D**

**8.The size of the backend loop switch event log is limited to 3000 events. What happens after the maximum is reached?**

- A.Event logging stops.
- B.The oldest events are overwritten.
- C.A new log file is created.
- D.The event log is automatically cleared.

**Correct:B**

**9.By default, newly added physical disk drives in an EVA storage system are automatically added to a \_\_\_\_.**

- A.host folder
- B.pool of virtual disks
- C.secondary disk group
- D.pool of ungrouped disks

**Correct:D**

**10.What does the Storage System Scripting Utility allow?**

- A.fault reporting to a remote connection
- B.the issuing of commands to manage the EVA
- C.use of scripts compiled for HSGxx controllers
- D.communication between Storage Management Appliance and HSV110 controllers

**Correct:B**
