Exam : **000-N20**

Title : IBM Rational Enterprise
Modernization Technical
Sales Mastery Test v1

Version : Demo

1.Which programming language is used in approximately 80 percent of legacy mainframe applications?

- A. Visual Basic
- B. C/C++
- C. COBOL
- D. Java

Answer: C

2.An enterprise customer's application development projects are often delayed because their production workload causes their System z servers to run at 100 percent utilization for extended periods of time. Which capability of the IBM Integrated Solution for System z Development best meets this customer's needs?

- A. test mainframe applications on an x86 Linux server
- B. queue application testing to run during non-peak hours
- C. access IBM System z application test servers in the cloud
- D. fine tune server resources to find balance between development and production

Answer: A

3.What is ISPF in z/OS?

- A. batch application type
- B. development environment
- C. programming language
- D. data storage system

Answer: B

4.Which feature of IBM Rational Developer for System z simplifies the development of SOA web services?

- A. embedded ISPF client
- B. WebSphere integration
- C. workstation syntax checking
- D. Enterprise Service Tools

Answer: D

5.What is the fundamental mechanism in Rational Team Concert for tracking and coordinating development tasks?

- A. work items
- B. source configuration management
- C. links
- D. artifacts

Answer: A

6.A customer wants to simplify the process of connecting their traditional mainframe applications with Web 2.0 front-ends.

Which feature of IBM Rational Developer for System z best meets their needs?

- A. EGL

- B. CICS Service Flow
- C. Service Component Architecture
- D. Unit Test

Answer: A

7.An organization currently uses a mainframe based SCM. They want to deploy the IBM Integrated Solution for System z Development.

What are two advantages of choosing SCM coexistence rather than replacement? (Choose two.)

- A. rapid deployment and ROI
- B. phased implementation
- C. reduced legacy software costs
- D. full traceability

Answer: A,B

8.How does workstation syntax checking reduce host CPU usage?

- A. requires fewer program compiles on z/OS
- B. reduces the lines of code to be processed
- C. lowers skill requirements for development
- D. replicates z/OS on an x86 Linux server

Answer: A

9.What are two drawbacks to ISPF green screen tools for mainframe application development? (Choose two.)

- A. They require constant connection to the mainframe.
- B. They are designed narrowly for cross-platform projects.
- C. They share mainframe resources with production.
- D. They are designed only for maintenance,not development.

Answer: A,C

10.Which Rational Team Concert feature enables a simple way of sharing change sets among members of a team?

- A. dashboards
- B. streams
- C. parallels
- D. snapshots

Answer: B
